Note: The [AVI-CULTURE—2-PLUS®](#) live, GMO-FREE 10-strain, avian-specific probiotic and 14 RAW Organic essential enzyme amino acid blend and [Organic Moringa Powder](#) are sprinkled onto the nestling/soft food and pellets and song/condition seed 5 minutes before serving as per instructions found on [The House of Crests Website Diet Article](#). One may administer or add fresh sprouts to the soft food and an inch or so sized piece of organic greens, sliced raw corn on the cob, cucumber, carrot, apple or veggies of choice every other day all year long to all except any hens that are incubating eggs. The Basic Seed Diet consists of 100% Plain Canary Seed. Contents of Condition Seed/Song Seed can be found on my diet plan article which can be accessed by clicking: [The House of Crests Diet Article](#). I use absolutely no Rape Seed (Canola Seed) as it is all GMO-LOADED!!

Feed the Basic Seed Diet sprinkled with [AVI-CULTURE-2-PLUS®](#) probiotic to all hens incubating eggs to insure inoculation of beneficial bacteria to the embryos through the porous eggshell & chicks from the first feeding by the hen to prevent any intestinal disorders that may result during the incubation process. This will insure that all chicks will be healthy and grow to their fullest genetic potential in the shortest time possible. Use [AVI-CULTURE-2-PLUS®](#) probiotic blend when conditioning the breeding stud *before* the breeding season and *continue its use throughout the entire breeding season*, the molt, showing as well as prior to shipping to help reduce the impact of stress and its many resulting illnesses. If bringing in new birds to the aviary, it is important to administer [AVI-CULTURE-2-PLUS®](#) probiotic blend double strength daily for 21 days to reduce and/or eliminate any negative impact as they adjust to their new environment to prevent any losses.
